How much data will I collect?

Where should I store my data?

What formats will my data be stored in?

How can I share my data safely with my supervisor or trusted peers?

If I wanted to reproduce my research findings in 5 years' time, what information would I need to record now?

How do I know my data are accurate and reliable? How will other people know?

**Who owns my data?**

**How can I ensure my data are preserved and remain accessible to myself and others in the long term?**

**Why should I share my data?**

**I don't want to share my data until it's absolutely necessary. How long can I keep my data private?**

**Who might want to use my data?**

**What is a data repository?**

Are some kinds of data more valuable than others?  Why?

Should I preserve all of my data?

Does my institution have a research data policy?

I've found some data in a data centre that I want to use. Are there any restrictions on what I can do?

I've written some code to process/analyse my data. What should I do with it when I've finished my research?
